# Sendbird Testing

1. Clone the repository from the given git access

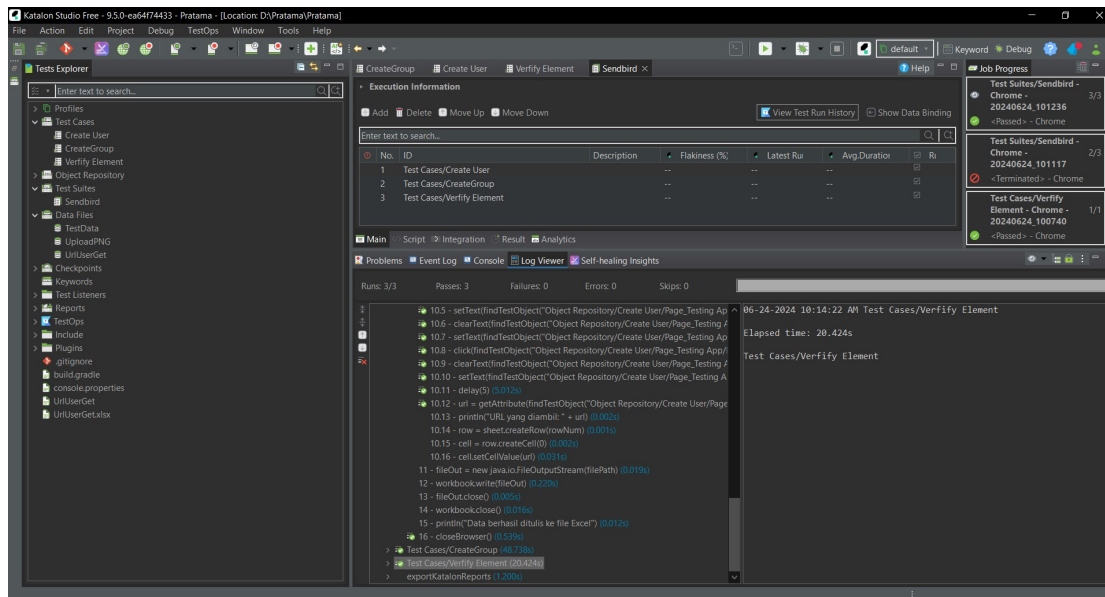

2. After the clone is successful the repository can be opened in Katalon Studio

3. There are 3 cases that will be worked on:
◆   Case 1: Setup AppID, UserID, and nickname (the URL for each user is different and will be saved in an excel file with the name UrlUserGet.xlsx in Data Files
◆   Case 2: Create a Group Channel with other users and send messages in the form of plain text, txt files, jpg files, and jpeg files.
◆   Case 3: Will verify the message received by the second user
4. Run Test Suites with the name Sendbird

5. After running, you can export the results
